Finally finished (or just beginning!)

March 4th, 2024

This portfolio site is finally finished and I'm so excited to share it with everyone! Browse around, check out my projects, and let me know what you think!

A quick note about the content on my portfolio site and within this blog: You will notice that I do not host ads, sell anything, or in any way attempt to monetize my content. Unlike many blogs, I do not participate in affiliate marketing, and I get no compensation for anything that I discuss within my blog posts. The things that I mention within this and subsequent blog posts come purely from my personal experience and are mentioned only in the interest of sharing my journey with others. Let me know if you have any questions!

So, who am I and how did this all start?

I'm an aspiring JavaScript developer, and a guy who loves to learn. I love baseball, running, coffee, reading, and, more than most other things, I love working in JavaScript. I work fulltime in the airline industry, but I spend most of my freetime learning and building new things. My journey as a developer started in the fall of 2021 when I stumbled upon a Udemy.com class in Python. I had been searching a long time for a creative outlet that fit my interests and abilities, and in Python, I had finally found it! Fast forward just over two years, and here we are. I learned the basics of Python, then decided in late 2022 for shift my focus to JavaScript, and I have been working in JavaScript ever since. All in all, I've been an aspiring developer for two years, and I have been working in JavaScript for about half that time. I am far from being a professional, but I love writing JavaScript logic, and I love the **limitless** possibilities that exist within the realm of software development.

about this blog

My hope for this blog is that it can be a place where I write about JavaScript, my projects, and my journey as a developer. I hope to write at least one post per month, so check back periodically for new content! I am so excited to continue learning and to connect with and collaborate with others. Email me or reach out to me on LinkedIn!
